

Letter of Recommendation

It is my pleasure to write this letter of recommendation for Milan. I have known them for about 6 years as an undergraduate student in electronics and computer. I have taught them in several courses. I have also mentored and evaluated their project work.

They have consistently demonstrated sharp intellect and a strong work ethic. Academically, they have maintained excellent performance throughout the undergraduate years, showing strength in both theoretical understanding and practical problem-solving. They are also a versatile and quick learner.

I particularly recall the third-year project titled "Recommendation Generator", which required extensive study in areas like AI and algorithms. The project demonstrated their self-learning ability and research interest.

As part of a DBMS course, they also led a team that built a system titled "No", where they served as the team lead. I had the opportunity to observe their leadership and teamwork closely in both projects.

Beyond the classroom, they actively participated in extracurricular activities such as Hackathon.

On a personal level, they are polite, easy-going, and friendly. It has been a pleasure to teach them, and I have always found them to be respectful and open to feedback.

I am confident that if given the opportunity to pursue the computer program at Harvard, they will excel and contribute meaningfully.

Please feel free to contact me at dsb@gmail.com if you need any further information.

Yours sincerely,

DSB, Cit Admin
